	Urgent	Not Urgent
Important	**Do (MVP): what I'll build first** ● Make fake data about how busy each study space is ● Show if each space is Quiet, Filling up, or Full ● Show a list of all study spaces, and let people pick one building ● Suggest the quietest space right now ● Show the busiest times for each space ●	**Schedule: what I'll add later** ● Show a simple chart of how busy a space is during the day ● Let students enter how busy a space is right now ● Let people search by noise level, outlets, or group vs. solo study ● Ignore old information that is out of date ● Switch to a bigger storage system for the data ●
Not Important	**Delegate: tools I'll use instead of building myself** ● A tool to read the options people type in ● A tool to save and read my data files ● A tool to handle dates and times ● A tool to find averages ● A tool to make random fake numbers ● A tool to test that my code works	**Delete: what I won't build** ● A website ● Extra data analysis tools that are too complicated ● Cameras or trackers, because they invade privacy and aren't needed ● User accounts and logins ● A phone app ● Smart predictions using machine learning
